                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        OPERATION SYSTEM: PC-DOS/MA-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/057,351
FILING DATE: 08-APR-1994
CLASSIFICATION: 435
PRIOR APPLICATION THER: US/08/272,102

APPLICANT: Ribozyme Pharmaccuticals, Inc.

APPLICANT: Ribozyme Pharmaccuticals, Inc.

APPLICANT: Beigelman, James

TITLE OF INVENTION: RNA Interference Mediated Inhibition of Telomerase Gene

TITLE OF INVENTION: Expression Using Short Interfering RNA (siNA)

TITLE OF INVENTION: Expression Using Short Interfering RNA (siNA)

FILE REFERENCE: 02-708-4, 400/080)

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Michozyme Pharmaceuticals, Inc.
APPLICANT: Beigelman, Leonid
APPLICANT: Beigelman, Leonid
TITLE OF INVENTION: RNA Interference Mediated Inhibition of Telomerase Gene
TITLE OF INVENTION: Expression Using Short Interfering RNA (siNA)
FILE REPERENCE: 02-708-A (400/080)
CURRENT APPLICATION NUMBER: PCT/US03/04088
                                                                                                                                                                                                                                    Gaps

WPI; 2002-292068/33. Gunderson K;

Array comprising adapter sequences useful for immobilizing or detecting a target nucleic acid sequence, has different addresses comprising different specific capture probes -

Claim 1; Page 189; 261pp; English.

The invention relates to an oligonucleotide array (I) comprising at least 25 different addresses (adapter sequences) with each comprising a different capture probe selected from a group consisting of the sequences given in ABQ00010-ABQ13409. (I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid (ABQ00010-ABQ13409) to a target nucleic acid to form a modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid, further comprises detecting the presence of the modified target

(I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid addresses of a target nucleic acid and contacting the modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid with (I), which further comprises detecting the presence of the modified target
employed to screen gene libraries to identify DKG reductases or cross reactive activities. DKGR nucleic acids may be sequenced and subjected to site specific mutagenesis to develop modified DKGR with desired properties that are absent or less pronounced in the wild-type proteins, such as greater catalytic efficiency, stability to heat, solvent tolerance, NADH dependent activity and different optimum pH. The sequence presented is the PCR primer, 28L5, used to amplify 2,5-diketo-D-gluconic acid reductase d (DKGRd) gene (clone pI-28) from DNA extracted from soil samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Array comprising adapter sequences useful for immobilizing or detecting a target nucleic acid sequence, has different addresses comprising different specific capture probes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

(I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid sequence by attaching a adapter nucleic acid acid and contacting the modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid, with city, further comprises detecting the presence of the modified target

The present sequence was used in the cloning of full-length mouse R35 croMA. R35 is a seven transmembrane receptor which is useful for treating neuropathic pain, inflammatory and chronic pain, incontinence, and disorders of the gastrointestinal tract associated with gut motility and secretion such as irritable bowel syndrome. It is also useful for inducing an immune response in a mammal to protect against the diseases. It is useful in screening assays to identify compounds which stimulate or inhibit the function of the polypeptide, to identify membrane bound or soluble receptors and also for the structure-based design of an agonist, antagonist or inhibitor of R35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses the isolated polypeptide, and polynucleotide encoding it, 2,5-diketo-D-gluconic acid reductase (DKGR) which is a member of the aldo-keto reductase superfamily. The reductase, in a particular in Pantoea sp., is useful for converting glucose to ascorbic acid, by culturing the host cell under conditions suitable for the expression of DKGR. Glucose is first converted to 2,5-diketo-D-gluconic acid by endogenous oxidases and this is then reduced enzymatically to 2-keto-L-gulonic acid by a heterologous DKGR expressed in the production strain of bacteria. DKGR nucleic acids and proteins are useful to make enzymes useful in industrial processes to convert glucose to vitamin C in a single organism. DKGR proteins or their fragments and derivatives are useful as immunogens to produce antibodies useful in screening for similar enzymes from other organisms and samples. These antibodies are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Diketo-D-gluconic acid reductases, isolated from the environment using polymerase chain reaction methods, useful to provide new catalysts with desirable traits for industrial processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2,5-diketo-D-gluconic acid reductase d; DKGRd; aldo-keto reductase; glucose; ascorbic acid; 2-keto-L-gulonic acid; vitamin C; immunogen; catalytic efficiency; thermal stability; solvent tolerance; pH optimum; PCR; primer; ss; pI-28.

One Hutch strain (HCV-H) of NANBV, designated the Hutch C59 isolate (HCV-Hc59) was propagated through passage in animals and the entire viral genome was cloned and sequenced the parties of purified liver or plasma derived from HCV RNA was used per cDNA priming reaction. Specific nucleotide primers derived from published HCV sequences and spanning the entire reported genomic sequences were used to prime the reaction. Selected target sequences were amplified using a PCR-based approach using a variety of nucleotide primers. The nucleotide sequences of the primers are given in AAQ22872-936 and AAQ24472. Amplified sequences were subsequently isolated, rendered blunt-ended and

The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in method comprises: (b) a primer designed based on the chromosome marker comultiwell plates; (b) a primer designed based on the chromosome marker multiwell plates; (b) a primer designed based on the chromosome marker complised corresponding to the marker is detected from the resultant amplified product to specify the discrimination Nos. of the multiwell containing the clones having said marker sequence; (d) the order of the maximum in the specified discrimination Nos. to array the multiwell containination Nos. that the same discrimination Nos. succeed to plates; (e) the clones in the multiwell plates of the specified discrimination Nos. to array the multiwell containination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the call altered from the amplified by using the above primer; (g) signals are detected from the amplified products; (h) the clones in the multiwell creconstituted as the positions on the chromosome and arrayed. The crones are meconstituted as the positions on the chromosome and arrayed. The containing the present PCR primers for human chromosome 21q22.1, which are present crepresent PCR primers for human chromosome 21q22.1, which are present invention.

            This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC0010-ABC99989, ABF0010-ABF9989 and ABI0010-ABC99989 and ABI0010-ABC9989 and specification, but was obtained in electronic form art of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleic acid. The method comprises monitoring the dispersion of a mixture of a sample and a probe labelled with a fluorescent intensity of a mixture of a sample and a probe labelled with a fluorescent intensity of a mixture of a sample and a probe labelled with a fluorescent the functional ground in the probe contains a base sequence complementary to a specific nucleic acid in the sample. The method is useful for clinical gene diagnosis by exploring unknown genes. It is useful for evaluaring the homology of an unknown gene with a control gene sequence and as a method of detecting genetic mutations e.g therapy for hepatitis C virus (HCV). The method is quicker and requires less labour as it specifically detects and quantifies the hybrid in a simple one-step measurement without requiring the separation of excess unhybridised probe. The method is more sensitive and can

detect small amounts of nucleic acids in sample e.g. tens of copies of target nucleic acids can be amplified to several ng. The present sequence represents a target DNA sequence from an example of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is based on a fragment of a mycobacterial gene which encodes a protein homologous to the 65KD antigen of mycobacterium. The is used in a pair as a primer to amplify mycobacterial genes to detect mycobacteria. The oligonucleotide can also be used as a labelled probe to detect amplified mycobacterial sequences. It reacts specifically with Mycobacterium avium DNA. see also AAQ06505-Q06515, AAQ06517-Q06523 and AAR08136.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

AAV34748-V34756 are primers used in the isolation of human and mouse type II interleukin-1 receptor (IL-IR) which is used in a method to investigate the regulation of the immune or inflammatory response in a mammal. This method involves administering a soluble type-II IL-1 receptor protein in an amount effective to bind to IL-1 and prevent treating alloantigen-induced rejection of transplanted tissues or treating alloantigen-induced rejection of transplanted tissues or organs, graft-versus-host disease and autoimmune dysfunction dependent upon the activation of T cells against self antigens, selected from rheumatoid arthritis, diabetes mellitus or multiple sclerosis.
                                                                                                                                                                         Regulation of interleukin-1 mediated immune or inflammatory response in mammal - comprises administering soluble IL-1 receptor protein, used in treatment of e.g. graft versus host disease and multiple

Set of oligonucleotides, useful for diagnosis and cell typing, i designed to detect single nucleotide polymorphisms and cytosine methylation status

Claim 1; SEQ ID 341035; 29pp + Sequence Listing; German.

```
Sequences shown in AAV41169 to AAV41181 represent antisense
cligonucleotides to the RNA component of human telomerase (hTR). These
antisense cligonucleotides specifically hybridise to a nucleotide
caquence within an accessible region of the hTR, but that does not
hybridise to a sequence within the template region of hTR. These
cligonucleotides may specifically be used for detection of an RNA
component of human telomerase in a sample. This is useful for diagnosing
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitory
cligonucleotides can inhibit the telomerase activity level in a cell by
interfering with transcription of the RNA component, decreasing the
half-life of the telomerase RNA component transcript, inhibiting the
cof the RNA component into the telomerase holoenzyme, or inhibiting the
polymerase activity of telomerase. These antisense oligonucleotides can
be used for inhibiting telomerase activity in both cultured cells and in
                                                                                                                                                                                                                                                                                                                                                                                                                cells in vivo. They can be used in therapeutics for treating or preventing cancer, for contraception or sterilisation, for immunosuppression, and for selectively down-regulating specific branches of the immune system, e.g. a specific subset of T-cells, in anti-inflammatory therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              component; human telomerase; antisense oligonucleotide; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             neuroblastoma; bladder cancer; colon cancer; prostate cancer; cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; ss.
               New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100.0%; Score 20; DB 19; Length 20; 100.0%; Pred. Sequences shown in AAV41169 to AAV41181 represent antisense
oligonucleotides to the RNA component of human telomerase (hTR). These
artisense oligonucleotides specifically bybridise to a nucleotide
sequence within an accessible region of the hTR, but that does not
oligonucleotides may specifically be used for detection of an RNA
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a cancer patient. The inhibitors
component of human telomerase in a cancer patient. The inhibitors
confortides can inhibit the telomerase activity level in a cell by
interfering with transcription of the RNA component decreasing the
coligonucleotides can inhibit the telomerase activity inhibiting the
polymerase activity of telomerase. These antisense oligonucleotides can
collymerase activity of telomerase activity in both cultured cells and in
cells in vivo. They can be used in therapeutics for treating or
preventing cancer, for contraception or sterilisation, for
immunosuppression, and for selectively down-regulating specific branches
cof the immune system, e.g. a specific subset of T-cells, in
anti-inflammatory, therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Type II interleukin-1 receptor; IL-1R; immune response; inflammation; regulation; soluble; cell surface receptor; treatment; alloantigen; fissue; organ; rejection; transplant; graft-versue-host disease; human; autoimmune dysfunction; T-cell activation; self antigen; primer; rheumatoid arthritis; diabetes mellitus; multiple sclerosis; ss.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 60, Application US/08495743

Betent No. 565446

GENERAL INFORMATION:
APPLICANT: Thomas J. Cummins, Susan M. Atwood
APPLICANT: Thomas J. Cummins, Susan M. Atwood
APPLICANT: John W.H. Sutherland, Johnne H. Kerschner
APPLICANT: John W.H. Sutherland, Johnne H. Kerschner
TITLE OF INVENTION: DIAGNOSTIC COMPOSITIONS, ELEMENTS,
TITLE OF INVENTION: AMPLIFICATION AND DETECTION OF TWO
TITLE OF INVENTION: OR MORE TARGET DNA'S USING PRIMERS
TITLE OF INVENTION: HAVING MATCHED MELTING TEMPERATURES
NUMBER OF SEQUENCES: 65
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIATE: New JOIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-08-495-739-60/c

US-08-495-739-60/c

Sequence 60, Application US/08495739

Patent No. 5702901

GENERAL INFORMATION:
APPLICANT: Thomas J. Cummins, Susan M. Atwood
APPLICANT: Lynn Bergmeyer, John B. Findlay
APPLICANT: Lynn Bergmeyer, John B. Findlay
APPLICANT: Lynn Bergmeyer, John B. Findlay
TITLE OF INVENTION: METHODS AND TEST KITS FOR
TITLE OF INVENTION: METHODS AND TEST KITS FOR
TITLE OF INVENTION: MAPLIFICATION AND DETECTION OF TWO
TITLE OF INVENTION: HAVING MATCHED MELTING TEMPERATURES
NUMBER OF SEQUENCES: 65
CORRESPONDENCE ADDRESS:
ADDRESSEE: Bastman Kodak Company, Patent Legal Staff
STREET: 343 State Street
CITY: Rochester
STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 30;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Indels

Patent No. 533865
GENERAL INPORMATION:
PAPLICANT: Schaz, Peter J.
APPLICANT: Cull Milard G.
APPLICANT: Miller, Jeff F.
APPLICANT: Schemer, Willem P.C.
ITTLE OF INVENTION: Peptide Library and Screening Method NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSER: William M. Smith
STREET: One Market Plaza, Steuart Tower, Suite 2000
STATE: California
COUNTY: San Francisco
STATE: California
COUNTY: USAN FRANCE COMPABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM FC COMPABLE
COMPUTER: Batentin Release #1.0, Version #1.25
CURASIFICATION NUMBER: US/07/963,321
FLILMS DATE: 18-07-1991

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

GENERAL INFORMATION:
APPLICANT: Realey, James T.
APPLICANT: Weinrich, Scott L.
TITLE OF INVENTION: Inhibitory Polynucleotides Directed
TITLE OF INVENTION: Inhibitory RNA Component of Telomerase
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: TOWNSEND and TOWNSEND and CREW LLP
STREET: TWO Embarcadero Center, 8th Floor
CITY: San Francisco
